SCENARIOS FOR USING ARPANET COMPUTERS

This scenario booklet is provided to facilitate the use of ARPANET host computer systems via the ARPANET. The objective of these scenarios is to aid a user in sampling host computers on the ARPANET, thereby stimulating his interest in using ARPANET.

The scenarios describe the login procedure, the use of some simple or interesting facilities, and obtaining on-line help facilities such as on-line documentation and interactive dialog with experienced users via "link" or "message" type mechanisms. The use of user TELNETS for "piggy-back login" is included to help system programmers in debugging and testing their protocol implementations. An exercise of editing and running a very simple program is also included, where appropriate.

The scenarios assume the environment of the MIT-DHCG PDP-10 computer system, but are readily adaptable to use from other systems. The annotated script is provided to assist you in the use of a particular host computer. Comments are enclosed in parenthesis, and user input is underlined. In the scripts, a carriage return is indicated by '<CR>', and a space by blank (i.e., no type). Escape to local user TELNET is indicated by backslash, the default escape character in the MIT-DHCG system. Additional blank lines have been introduced in many instances to improve readability of the script.

Acknowledgments: The author wishes to acknowledge the help of Bob Bressler, Rich Guida, Bob Metcalfe, Jim Michener, and Neal Ryan in preparing this Scenarios booklet.

Note: Your comments and suggestions will be greatly appreciated. Please direct all comments to Abhay Bhushan, Room 208, 545 Technology Square, Cambridge, Mass 02139. (Tel. 617-864-6900 x1428).

TABLE OF CONTENTS

<u>Host Computer</u>	<u>Address</u>	<u>Page</u>
UCLA SIGMA-7	1	3
UCLA 360-91	65	5

\DISCONNECT<CR>\     (escape to NETWRK and disconnect)
```

Scenarios for Using ARPANET Computers
Request For Comments 254

Abhay Bhushan
MIT Project MAC

UCLA-CCN IBM 360/91 Network address 65.

CCN also offers a Remote Job Service. Their TELNET service is currently by arrangement only. We have not used it yet.

\ccn<CR>-ucla connection is: completed.\ (success)

UCLA CCN 360/91 TELNET
TELNET SERVICE AVAILABLE BY ARRANGEMENT ONLY
FOR INFORMATION CALL R.T. BRADEN, STEVE WOLFE, OR STU FEIGIN AT
(213) 825-7518 OR 825-7424

\disconnect<CR>\ (you escape to NETWRK and disconnect)

SRI (NIC) PDP-10 TENEX Network address 2.

NIC is best used in character-at-a-time mode with remote echo. After connection is completed you should change your mode to full-duplex at NIC (their default is half-duplex). NIC can also be used in half-duplex (with local echo), line-at-a-time mode, but use is not as convenient. Although NIC commands are similar to BBN TENEX, the NLS subsystem is different.

\nic<CR>connection is: completed^ (to connect to NIC)

NETWORK USERS SHOULD LOGIN AS ONE OF THE FOLLOWING USERS:
MIT-MULTICS MIT-DMCG MITRE UCLA-CCN UTAH ILLINOIS RAND
BBN-TENEX BBN-IMP AMES-ILLIAC UCLA-7

ARC TENEX 1.26.01.04 DATE ARC EXEC 1.32 (NIC herald)
@FULL<CR> (you request full-duplex mode,
"FULL" will not print)
@LOGIN MIT-DMCG<CR> (@ is NIC prompt, you login)
(password) ARPA<CR> (password is not printed)
(account #) 3<CR>
JOB nnn AT CONSOLE mmm

@SYSTAT<CR> (to see who is using system)
..... (list follows)

@? (will display commands)
..... (list follows)

link<ESC> (to) <ESC> (user) MELVIN (links your console to
MELVIN's)
;hello are you there?<CR> (prefix comments with ";", whatever
is typed at either console appears on
both consoles)
@break (links)<CR> (this disconnects any "links" to
other NIC users)
@DIR<CR> (list files in user's directory)
<MIT-DMCG>
..... (list follows)

@NLS<CR> (to use NIC text editing system TNLS)
ID: <your initials><EOT> (terminate with <EOT> or <Control-D>)
DEVICE: II-TERMINAL (type "T" if you are in FULLDUPLEX
or type "N" if you are in HALFDUPLEX)
(NLS will load or create your initial file)

("*" is NLS prompt, <EOT> or <Control-D> is default
command accept character, <CAN> or <Control-X> kills
the current line, and <SOH> or <Control-A> serves the
rubout or character delete function)

<u>*execute journal</u>	(to access journal system)
<u>submit message</u>	(to send a message using the NIC Journal)
<u>This is a test message.<EOT></u>	
<u>number <EOT> yyyy</u>	(typing <EOT>, the default command accept accept causes system to assign a unique catalogue number yyyy to the message)
<u>title: Test Message<EOT></u>	(you enter a title)
<u>distribution id1 id2 <EOT></u>	(id1 and id2 are identifications of persons known to system)
<u>status <EOT></u>	(system reiterates information entered by user)
<u>go: <EOT></u>	(begins journal process, assumes you as author)
 JOURNAL SYSTEM IN PROGRESS	
<u><ETX></u>	(<ETX> or <Control-C> is the attention getting character to get EXEC)
<u>@CONTINUE<CR></u>	(to resume NLS)
<u><CAN></u>	(<CAN> or <Control-X> to get NLS prompt)
 <u>*print branch 0.1<EOT></u>	 (to print some files)
<u>.....</u>	(list follows)
 <u>*execute quit<EOT></u>	 (to quit NLS and return to EXEC)
<u>@LOGOUT<CR></u>	(to logout from NIC)
<u>Job nnn logged out at</u>	
 <u>\disconnect<CR>\</u>	 (escape to NETWRK and disconnect)

SRI (AI) PDP-10 TENEX Network address 66.

(The SRI (AI) computer uses the TENEX operating system, and is similar to the system at BBN. We have not been able to log into SRI (AI) system as they are currently not functioning as a server. Hence no scenario is provided. This section will be updated as soon as SRI (AI) is able to accept login over the ARPANET.)

UCSB IBM 360/75 OLS Network address 3.

UCSB OLS normally treats network interaction as half duplex, and assumes local echo. Both character-at-a-time and line-at-a-time modes can be used. The user can obtain remote echo by going full-duplex. Normally upper case alphabetic characters are mapped into alphabetic characters and lower case alphabetic characters into Greek characters. (Hit <BRK> on MIT-DMCG IMLAC if you are not in upper case mode). The following scenario assumes line-at-a-time mode with local echo.

```
\UCSB<CR>connection is: completed\      (connects to UCSB)
UCSB ON-LINE SYSTEM
ENTER USER NUMBER 196<CR>      (you enter "196<CR>")
196      (this is echoed)
ID NUMBER= 57372<CR>      (you type "57372<CR>")
USER NAME= ARPA<CR>      (you type "ARPA<CR>")
ARPA
JOB NAME= SITE-NAME<CR>      (enter appropriate job name )
SITE-NAME      (this is echoed)
AUTOSAVE CODE = 4
LOAD MOLSF<CR>      (loads MOLSF, the mathematical
                      subsystem)
MOLSF
FILE LOADED;1 ;REAL ;LOAD 5;STOR X;DISP X <CR>
                      (the default prefix is ";". Every key
                      must be preceded by the prefix and
                      followed by a space. LOG, STOR, etc.,
                      are all keys on the UCSB system)
5.      +00;LOG X;STOR Y;DISP Y <CR>      (more calculations)
1.60944      +00      (the MOLSF subsystem is actually very powerful,
                      refer to UCSB OLS Manual for details)
;SYST <CR>      (to go back to SYS from MOLSF)
WORK AREAS UPDATED
;LOAD NET<CR>      (to use UCSB Network subsystem)
NET      (this is echoed)
FILE LOADED ;2 ;LOG 70<CR>      (to use UCSB User TELNET)
FOREIGN SITE NO. = 70;<CR>      (70 is DMCG)
FOREIGN SOCKET NO. = 1;<CR>      (logger socket)
1
      .....      (you are now connected)
;2 ;ID <CR>      (to display host status)
KNOWN HOSTS ARE --
      .....      (list follows)
;RES<CR>      (to reset connections)
RESET COMPLETED
;1 ;DEL <CR>      (to purge sockets)
```

SOCKETS PURGED

HELP <CR> (lists all non-standard keys)
..... (list follows)

;STATE <CR> (will list NETOLS states)

PREFIX IS ;
HALFDUPLEX
SHIFT IS OFF

!PREFIX !<CR> (will change prefix to "!")
!SHIFT !STATE <CR> (to get both upper and lower case
alphabetics. This may be required
for example, to piggy back to
Multics. ";lfd" will send <LF>.)

PREFIX IS !
HALF DUPLEX
SHIFT IS ON

!PREFIX ;<CR> (prefix is again ";")
!UNSHIFT <CR> (to turn SHIFT "OFF")
!SHIFT ON<CR> (to get both upper and lower case.
This may be required, for example
to "piggy back" to Multics. ";LFD"
will send <LF>.)
(to get back to SYS level again)

;SYST <CR>
WORK AREAS UPDATED
;DOWN (DOWN will logout but not disconnect)
WORK AREAS PURGED (you are logged out but connected)
;SYS <CR> (to login to UCSB again)

ENTER USER NUMBER
;LOGOUT (will logout and disconnect)
\DISCONNECT<CR>\ (escape to NETWRK and disconnect,
if not already disconnected by UCSB)

UTAH PDP-10 TENEX Network address 4.

(The Utah computer uses the TENEX Operating System, and is similar to the system at BBN. The password for Network users will be:

THISISANINTENTIONALLYLONGPASSWORD

As yet, their logger is unavailable, and we have been unable to login on their system; hence, no scenario script is provided.)

BBN PDP-10 (A) TENEX Network address 69

TENEX is best used in character-at-a-time mode with remote echo. However, as TENEX treats network users as half-duplex by default, you should either change your mode to FULLDUPLEX, or escape into NETWRK and request local echo. At command level TENEX does not distinguish between upper and lower case alphabets. The programs "DOCTOR" and "LIFE" may not be available to you in the BBN PDP-10(A) system, but can still be used from the BBN PDP-10(B) system.

```
\TENEX<CR>settings loaded. and connection is: completed\
                                   (to connect to BBNA TENEX)
BBN-TENEX 1.26.0  6-AUG-71  EXEC 1.32.2
@FULL<CR>                                   (you request full-duplex mode)

@LOGIN TENAR<CR>                             (you login)
(PASSWORD)
ARPA<CR>                                   (this will not be printed)
(ACCOUNT) MIT-AKB<CR>                       (appropriate account)

JOB 3 ON TTY61 10-OCT-71 3:30
YOU HAVE A MESSAGE                           (if a message is waiting)

@?                                           (@ is TENEX prompt character;
                                           "?" will list TENEX commands)

COMMANDS ARE:                               (list follows)
.....

@TYPE MESSAGE.TXT<CR>                       (to read your message)
; <TENAR> MESSAGE.TXT;1                     (message follows)
.....

@SYSTAT<CR>                                (to see who is using system)
.....                                  (list follows)

LINK<ESC> (to) <ESC> (user) TOMLINSON       (will link your console
                                           to TOMLINSON's)
;HELLO THERE?<CR>                          (prefix comments with ";", whatever
                                           is typed at either console appears on
                                           both consoles)

@BREAK (links)<CR>                          (this disconnects any "links" to
                                           TENEX users)

@LIFE<CR>                                   (to play game of life)
DO YOU WISH TO SEE AN EXPLANATION? YES<CR> (explanation follows)
.....

<ETX>                                       (<ETX> or <Control-C> is the attention
                                           getting character to get EXEC)
```

<u>@DOCTOR <CR></u>	(psychiatrist service--self explanatory) (you now converse with DOCTOR)
<u>*GOODBYE.</u>	(normal exit, * is prompt from DOCTOR) (the Doctor's charges, etc.)
<u>@DIR <name><CR></u>	(to list the directory called <name>; try "DIR SYSTEM".) (listing follows)
<u>@TYPE <name><CR></u>	(to print the file called <name>) (list follows)
<u>@TTYIST<CR></u>	(to test teletype communications) (test data follows)
<u></u>	(or <rubout> will end tests prematurely)
<u><ETX></u>	(<ETX> Or <Control-C> will get you back to EXEC)
<u>@TELNET<CR></u>	(to use BBN User TELNET)
TELNET 30-AUG-71 RST	
<u>VERBOSE? Y<CR></u>	(this will instruct you to proceed) (instructions on use follow)
<u>HOST: 106<CR></u>	(to connect to DMCG, i.e., octal 106) (you are connected to DMCG)
<u><ETX></u>	(to get back to EXEC)
<u>@LOGOUT<CR></u>	(to logout of TENEX)
<u>\DISCONNECT<CR>\</u>	(escape to NETWRK and disconnect)

BBN PDP-10 (B) TENEX Network address 133.

The BBN PDP-10(B) is an experimental TENEX system similar to the BBN PDP-10(A) TENEX system (network address 69.). Because of the similarities of the two TENEX systems, no scenario is given here. Please refer to the BBN PDP-10(A) system (page 12) for the scenario. The account number to be used for the system is "1" instead of the "site name" used in the BBN PDP-10(A) system.

MIT H645 MULTICS Network address 6.

Multics interacts line-at-a-time and assumes local echo.
Multics require both upper and lower case alphabets. Commands
are in lower case alphabets.

\mult<CR>ics connection is: completed\ (you type "mult<CR>")
Multics 15.20; MIT, Cambridge, Mass.
Load = 39.0 out of 41.0 units; users = 38'

\disconnectCR\   (escape to NETWRK and disconnect)

```

Scenarios for Using ARPANET Computers
Request For Comments 254

Abhay Bhushan
MIT Project MAC

MIT PDP-10(AI) ITS Network address 134.

(The MIT PDP-10(AI) system uses the ITS operating system and is similar to the MIT PDP-10(DMCG) system. At present the host is not connected to the ARPANET.)

RAND 360/G5 MVT OPERATING SYSTEM Network address 7.

(We have not been able to log into RAND, as they are currently intending to be users only. Hence, no scenario script is provided. This section will be updated as soon as RAND can accept our login over the ARPANET, and provide service on a regular basis.)

Scenarios for Using ARPANET Computers
Request For Comments 254

Abhay Bhushan
MIT Project MAC

RAND PDP-10 TENEX Network address 71.

(Rand PDP-10 is currently not functioning over the ARPANET.
Hence no scenario is provided. This section will be updated as
soon as the host is providing service.)

SDC IBM 360/75 Network address 8.

(We have not been able to log into SDC. as their logger is not available. Hence no scenario script is provided. This section will be updated as soon as SDC can accept login over the ARPANET)

HARVARD PDP-10 DEC 10/50 MONITOR Network address 9.

Harvard system treats network interaction as half-duplex, character-at-a-time, and assumes local echo. The prompt character is ".", and the escape character is <Control-C>. No lower case text is accepted (hit the <BRK> key on the IMLAC if you are not in upper case mode).

\HARVARD<CR> connection is: completed. \ (you type "HARVARD<CR>")
JOB N Harvard 4S72BU.40
TTYMM

#62,50
RLS

(you type "62,50")
(you type " RLS" which is not printed)

(the message of the day is now printed out)

.SY<CR>
.....

(to see who is using the system)
(list follows)

.IMP
*ICP 106

(to use Harvard's user TELNET)
(to connect to MIT-DMCG, i.e., octal 106)
(* is the prompt character in TELNET)

IMPn CONNECTED TO MIT(1)
.....

(you can now loginto MIT-DMCG system)

<US>

(you type <US> or <control-_>, octal 037
to escape to the Harvard system)

BACK TO HARVARD JOB nn
.IMP
*CLOSE IMPn

(to use Harvard TELNET again)
(this will close connections)

*<ETX>

(you type <Control-C> or <ETX>, octal 003
to get back to top level)

.R TECO <CR>

(you are now calling the editor TECO)

*I <TAB> TYPE 100 <CR>

(* is the editor prompt character)

100 <TAB> FORMAT(' HELLO THERE.') <CR>

<TAB> END <CR>

\$\$\$\$ <CR>

(you type <ESC> or <ALT> which is
echoed as "\$")

*EWDSK:TEST.FOR\$\$\$\$ <CR>

*PWEF\$\$\$\$ <CR>
*<ETX>

(file it on disk with the name TEST.FOR)
(<ETX> or <Control-C> to exit to
top level)

.EXECUTE TEST.FOR <CR>

(this compiles, runs and loads your program
(the program works)

HELLO THERE.

.KJ <CR>

(to kill job and logout)

CONFIRM: K

(this will log you out)

(appropriate logout message)

\DISCONNECT<CR>\

(you escape to NETWRK and disconnect)

LINCOLN LABS IBM 360/67 CP-CMS Network address 12

Lincoln CP-67 interacts line-at-a-time and assumes local echo. No distinction is made between upper and lower case alphabets at command and service level.

\\1<CR>-67 connection is: completed. (you type "\\1<CR>")

LINCOLN LABORATORY CP/67 ONLINE

login net<CR>

ENTER PASSWORD:

arpa<CR>

(this will not print)
